BAKER ALLOZI

FRONTEND DEVELOPER

PROFILE

Skilled in JavaScript, React, Next.js, Redux.js, and diverse React libraries. A versatile software developer who started with Kotlin in 2020, moved on to C++ and Python for tackling problem-solving and data structures, and has been passionately focused on web development since 2022.

WORK EXPERIENCE .|. PROJECT

E-commerce 1 .|. full stack

Design and development of a full-stack E-commerce website focused on scalability and user experience.

Front-end built with React.js.

Backend services powered by Supabase.

Efficient state management using Redux for global state and React Query for remote state.

Authentication system supporting user login via email and Google OAuth.

Secure password management and user profile updates (username and avatar).

Store management with full CRUD operations for products.

Robust inventory management visualized through interactive charts.

Real-time chat feature for seamless communication between clients and store owners, enhancing collaboration and customer support.

E-commerce 2 .|. full stack

Comprehensive implementation of a modern web application using Next.js.

Utilizes Context API for global state management.

Employs Supabase for backend operations and data handling.

Robust authentication system supporting:

Google login.

Secure password changes.

User profile customization.

Efficient CRUD operations integrated with a relational database.

Real-time chat functionality for instant user communication.

Core focus on SEO optimization to enhance search engine visibility.

Middleware logic for access control and enforcement of business rules.

Integration of a SaaS subscription model for recurring revenue stream.

Demonstrates versatility and potential for business growth.
